

You'll never blow on another fire again.

Since Man discovered Fire we've been seeking better ways to feed it the breath of life.

For millennia, we used only the "bend and blow" technique, often hyperventilating in the process! The manual squeeze bellows simply transferred our effort to a different set of muscles.

More recent attempts to power airflow to fire have fallen short, resulting in tools that are too big, clunky, dangerous, expensive and/or impractical for use both indoors and out.

But now there is **FiAir**.™

- Portable, hand-held tool
- Length = 8.75" 22.2 cm
- Diameter = 2.25" 5.7 cm
- Weight = 3.5 oz 99.2 g
- Powerful motor
- Requires only 2 AA batteries
- Glow-in-the-dark power button
- Patent Pending

FiAir™
The handy little blower to feed your fires

EASY
forced air at the push of a button

FAST
kindling and stoking with no fuss

POWERFUL
so you don't have to bend or
get too close to the fire

SAFE
shuts off instantly if dropped

Made in America
for Keepers of the Flame
Worldwide

INTRODUCING
FiAir™
The handy little blower to feed your fires

If you want your fires to
grow big and strong,
you have to feed them right.

Finally— The right tool for the job

of feeding Charcoal and Wood Fires

FiAirTM
The handy little blower to feed your fires

First Light to Cooking Temp in
HALF THE TIME

FiAir changes the debate over the virtues of Charcoal vs. Gas grilling.

Our research shows that nearly everyone prefers the flavor of charcoal, but the time it takes for charcoal to reach cooking temperature can be a turnoff. Some have converted to propane gas grilling for that reason alone.

Never again sacrifice taste to save time.

Grillers often use accelerants and/or a chimney to hasten the heating process and it still takes 15 to 30 minutes or more before the coals are hot enough for cooking. Our tests show that no matter how you light your charcoal, **FiAir** cuts the time to cooking temperature easily by half. Typically, your coals will be ready for cooking in just **8-12 minutes**.

First Light to Full Blaze in
about **TWO MINUTES**

Who cares if the weather outside is frightful with **FiAir** at the hearth.

There's nothing quite like the sight, sound and scent of a real wood fire. Now, a crackling fire in a cozy hearth is just two minutes away. It's true: **FiAir** kindles your cordwood to a roaring blaze in two minutes or less and keeps it that way when you add logs with a few well-placed bursts of life-giving air.

Never again sacrifice a real wood fire for an instant gas flame.

There are plenty of fancy fireplace tool sets, costly accessories and special starters on the market. But if you simply want to enjoy your fires more and mess with them less — all you really need is **FiAir**.

FiAir runs on just 2 AA batteries (NOT as shown)
